

ASSIGNMENT OF DATA STRUCTURE

RECURSION ASSIGNMENT

6) def print_array(arr, index):

 if index < len(arr):

 print(arr[index])

 print_array(arr, index + 1)

my_array = [1, 2, 3, 4, 5]

print_array(my_array, 0)

7)

def print_reverse_array(arr, index):

 if index >= 0:

 print(arr[index])

 print_reverse_array(arr, index - 1)

Example usage:

my_array = [1, 2, 3, 4, 5]

print_reverse_array(my_array, len(my_array) - 1)
